

Above: QoL changes of DN (baseline – 5-year scores, n = 100)
Below: QoL changes of non-DN (baseline – 5-year scores, n = 121)

Supplementary Figure 2. Comparison of the 5-year follow-up QoL changes from baseline in each group. The mean KDCS and PCS scores decreased in both groups, but the MCS score did not change (DN: KDCS, $p = 0.001$; PCS, $p = 0.003$; MCS, $p = 0.05$; non-DN: KDCS, $p = 0.007$; PCS, $p = 0.01$; MCS, $p = 0.33$).
