

Supplementary Table 1. Incidence of DGF and eGFR according to the degree of immediate postoperative proteinuria in LDKT recipients

	ACR ($\mu\text{g}/\text{mg}$)		p-value
	<300 (n = 114)	≥ 300 $\mu\text{g}/\text{mg}$ (n = 72)	
DGF, n (%)	1	0	
eGFR			
Before discharge	94.5 (70.7–104.9)	90.9 (76.1–100.9)	0.30
Postoperative 3–6 mo	84.1 (61.9–96.8)	80.2 (61.3–95.3)	0.21
Postoperative 1 yr	88.7 (69.9–98.0)	88.7 (67.5–96.0)	0.18

Data are expressed as median (interquartile range).

ACR, spot urine albumin-to-creatinine ratio; DDKT, deceased donor kidney transplantation; DGF, delayed graft function; eGFR, estimated glomerular filtration rate.
